SKILLS & CERTIFICATIONS

MS in Information Technology | GPA: 4.0

Arizona State University

Tempe, AZ

May 2024

Bachelor of Engineering - Computer Science

Vishwakarma Institute of Information Technology

Pune, India

May 2019

SKILLS & CERTIFICATIONS

Prog Lang: Javascript, Python, Java, SQL

Prog Tools: Git, Docker, Kubernetes, Postman

Libraries: OpenAI, TensorFlow.js, COCO-SSD, PyPDF2, JWT, React

Frameworks: Django, Flask, Bootstrap, Node.js, Nextjs

API Development: Django Rest Framework, Swagger, Postman

Database Technologies: MySQL, MongoDB, PostgreSQL

WORK EXPERIENCE

Backend Engineer intern | Flow Global Software Technologies LLC

July 2024 - Present

Technologies: Django, Reactjs, Git, Electron, PostgreSQL

- Led a 5-person team to implement a LinkedIn scraper, extracting **500+** public profiles daily with **98%** data accuracy.
- Engineered a master-slave architecture for web scraping, reducing processing time by **66%**, from 86 seconds to 29 seconds per cycle.
- Developed an Indeed scraper, improving data retrieval efficiency by **45%** and capturing 1,000+ company profiles.

Software Engineer | Infinichains, Pune, India

July 2021 – July 2022

Technologies: Javascript, React, Git, Elixir, MySQL, NodeJS

- Automated a web tool for farmers, reducing manual errors by **95%** and boosting task completion rates by **40%**.
- Designed and launched the Credible Connect Android app, enabling offline data collection with location tracking and image capture.
- Reduced server costs by **25%** using automated log and image deletion, optimizing performance and storage.

Software Developer | WhiteSnow, Pune, India

Aug 2019 – Sept 2020

Technologies: Python, Javascript, MySQL, Angular, Postman

- Built customisable language controls in JavaScript for WhiteSnow, improving survey creation efficiency for **John Hopkins University's** AIDS and STD research, achieving **90%** paperless forms.
- Created custom scripting tools to adapt functionality as needed, fulfilling diverse project requirements effectively.

Software Developer Intern | Inprospect Technologies, Pune, India

June 2018 – July 2018

- Created a dynamic profile page, enhancing overall user experience and simplifying updates.
- Wrote scripts to automate database management for **10,000+** records, ensuring accurate and efficient updates.
- Refactored existing code to enhance database functionality and improve overall efficiency.

ACADEMIC PROJECTS

Django Blog App

Technologies: Django, PostgreSQL, RESTful APIs, Postman, HTML, CSS

Jun 2024

- Developed a Django-based blog platform with a **PostgreSQL** backend, utilizing Django authentication for secure user management and implementing **CRUD** operations via Django ORM for efficient content handling.
- Created RESTful APIs and an interactive UI using HTML and CSS, incorporating advanced **sorting and filtering** capabilities, including dynamic features to display **popular** blogs based on likes and comments, enhancing user engagement.

Car Game

July 2024

Technologies: Pygame, Python, Random

- Developed a dynamic car racing game using object-oriented programming with classes for vehicles, optimizing rendering through **sprite** management.
- Implemented collision detection using bounding **box algorithms** and Pygame's event handling for responsive user input on acceleration and lane changes.
- Enhanced gameplay by integrating state management for lane changes and visual indicators for fuel levels and distance.

Object Detection with Webcam

Mar 2024

Technologies: TensorFlow.js, COCO-SSD

- Prepared an object detection application utilizing **TensorFlow.js** and **COCO-SSD model**.
- Integrated webcam access to detect objects in real-time video streams.

BookSwap Hub Web app

Dec 2023

Technologies: Node.js, Express.js, MongoDB, JWT, EJS Templates, Docker

- Build a Book Swap Hub, a web app for effortless book exchanges, incorporating features such as book addition, browsing, and request processing.
- Established secure user authentication using **JWT tokens** and middleware functions, following **MVC** architecture for organized code structure. Developed routes for book CRUD operations, request handling, and an about page in the app.
- Developed a responsive user interface with **EJS** templates to improve user experience across devices.
